

1 Good Commit Message Examples

- "feat: add 404 handler and global error middleware"
- "chore: setup standard API response pattern"
- "refactor: move error handling into middleware layer"
- "feat: implement reusable middleware for errors and responses"

2 Rules of Thumb for Commit Messages

- **Start with a type:** `feat` (new feature), `fix` (bug fix), `chore` (setup/maintenance), `refactor` (code restructuring).
- **Be concise but descriptive:** one line that explains *what* changed, not *how*.
- **Use present tense:** “add” not “added”.
